

Day 9

When we ran this code my partner stood in front of the camera. The camera detected him and started to place circles around him aligned to get his shape/pose accurately. Sometimes it would circle background objects.

Day 10

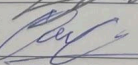

While running this code my partner was in front of the camera raising his arm. During this it is supposed to detect the angle between his side and his arm. It said the angle was 190° but we think it was much smaller since his arm wasn't that straight to be above 180° .
